

JOBU orchid clip

The JOBU orchid clips: so many to choose from!

The JOBU orchid clip is available in many, many models but each one ensures the quick effective securing of a pot orchid's stem to its cane.

The JOBU orchid clip is secured as follows:

1. Plastic orchid ring:

Slide the 'eye' over the cane, and insert the stem into the other end that you can open by pulling apart.

2. Plastic orchid clasp:

Clip the opening onto the cane, and insert the stem into the other end that you can open by pulling apart.

3. Barrette:

Hold the cane and stem together, squeeze the barrette open, and place it around both cane and stem.

4. Bent foam-covered wire:

Surround the cane and stem with the bent part of the clip and bend the other end around them.

5. In some cases, JOBU clip rings also provide a good solution.

JOBU orchid clips are used for:

- the production of pot orchids: Phalaenopsis, Dendrobium, Cymbidium and any other kind of pot orchids that produce flower stems requiring support.

JOBU orchid clips: take your pick!
